Andrew Westling

Design Engineer

✉️ hi@andrewwestling.com
📍 Brooklyn, NY

Design engineer with a formal background in architecture and a decade of experience in web development. Specialty in the intersection of design and engineering: building design systems, crafting resilient interfaces, and thinking holistically about how products are structured and scaled. Skilled with **TypeScript**, **React**, **Next.js**, **Tailwind**, agentic AI tooling, and more. Experienced doing platform-level work that multiplies the output of large engineering organizations.

💼 Experience

Senior Design Engineer

9/2024–Present

Alloy · New York City

Solving problems that arise where design and engineering overlap. Alloy is an end-to-end identity and fraud prevention platform for financial institutions and fintechs.

- **Platform migration**: partnering with a small frontend platform team to lead an architectural migration of Alloy's frontend application, with rollout planned across ~50 product engineers
- **Filter interfaces**: built new filter interfaces for Alloy's risk management platform, improving analyst workflow for complex, multi-dimensional data
- **Design system tooling**: built an internal component usage reporting tool to analyze React component adoption across the codebase, enabling data-driven decisions about design system evolution
- **Design system mentorship**: serve as the design system education resource for Alloy's product engineers, bridging design intent and implementation across teams

Senior UI Engineer

10/2023–8/2024

Droit · New York City

Front-end application development. Droit builds tools for decision-making and global regulatory compliance for financial institutions.

- **Applications**: productionized and delivered the first version of a new application to help analysts validate transaction reports before they are sent to regulators
- **Design systems**: improved build performance and developer experience of Droit's component library

🔧 Tools

AI Tooling

Cursor, Claude Code, Codex, Conductor, CodeRabbit, Agentic Workflows

General

TypeScript, Vercel, CircleCI, AWS, GitHub, Docker, Linear, Visual Studio Code, Figma

Front End

React, JSX/TSX, Next.js, Vite, GraphQL, Apollo, Prisma, Jest/Vitest, Node.js

UI

Storybook, styled-components, SCSS, Tailwind, Flowbite, Ladle, Radix, MDX, HTML/CSS

🎓 Education

B.Arch, Architecture
University of Oregon

Updated April 2026

Senior Software Engineer

7/2022–3/2023

Forte · remote (New York City)

Feature development. Setting up tools and culture. First engineering hire. Forte is a purpose-built music education platform for teachers and students.

- **From scratch**: set up Forte's Next.js application from the ground up; chose tools and workflows to enable quick iteration; established a component library for consistent user experience
- **Built features**: built the first iteration of various customer-facing features for Forte's marketplace: Teacher Profiles; Certified Institutions; Invitations and Sign Up; Teacher Ratings and Reviews; "Switch Role" functionality; etc.
- **UX/Product Architecture**: informed the UX, product flow, and overall architecture of a multi-role marketplace application

Senior Front End Engineer

4/2021–6/2022

Monograph · remote (New York City)

Design system and feature development for Monograph's applications. Monograph makes tools to help architecture firms manage their projects, budgets, and tasks.

- **Design systems**: built components for Monograph's component library; wrote documentation and set up workflows between Figma and the codebase
- **Features**: built customer-facing features: Team Directory; filter functionality for Monograph Resource; Settings UI; "Consultants" feature; etc.
- **Glue work**: process documentation, tool selection, configuration, code reviews, data migration scripts, customer support collaboration, bug triaging — the coordination that kept the team moving

Software Engineer

7/2018–3/2021

Better.com · New York City

Design system and feature development for Better's loan origination platform. Better.com is a mortgage lender.

- **Design systems**: established Better's Design Systems team; built libraries to empower engineering teams to build consistent and clean UIs
- **Features**: built assorted borrower-facing features: Redisclosure Service; "Required Assets and Buffer" logic; Authentication/Session Expiration; UX for uploading a competitor's Loan Estimate; Loan Overview page; etc.
- **Integrations**: extended integrations with sales and marketing tools (call scheduling, A/B testing, etc.)

Software Engineer

9/2015–6/2018

Architizer · New York City

Full-stack and front-end feature development and infrastructure maintenance. Architizer is a platform to help architects find products for buildings.

- **Component libraries**: established and maintained a UI component system to speed up feature development, and improve collaboration with designers
- **Features**: built internal- and external-facing features: a private messaging interface; directory interfaces to Solr search indexes; etc.
- **Integrations**: extended integrations with external tools for analytics, error logging, marketing, and customer support

Software Engineer

9/2014–8/2015

EyeCue Lab · Portland, Oregon

Internship-to-hire. Consultancy/agency setting. Built marketing pages and full-stack features for web applications and client projects.

AppleCare Advisor

6/2013–5/2014

Apple · remote (Eugene, Oregon)

Technical phone support and customer service for macOS products while completing degree.
