Andrew Westling

Design Engineer

hi@andrewwestling.com
Brooklyn, NY

Design engineer with a formal background in architecture and a decade of experience in web development. Specialty in the intersection of design and engineering: building design systems, crafting resilient interfaces, and thinking holistically about how products are structured and scaled. Skilled with **TypeScript**, **React**, **Next.js**, **Tailwind**, agentic AI tooling, and more. Experienced doing platform-level work that multiplies the output of large engineering organizations.

Experience

Senior Design Engineer

9/2024–Present

Alloy · New York City

Design engineering at an identity and fraud prevention platform for financial institutions. Solving problems where design and engineering overlap.

- **Platform migration**: partnering with a small frontend platform team to lead an architectural migration of Alloy's frontend application, with rollout planned across ~50 product engineers
- **Filter interfaces**: built new filter interfaces for Alloy's risk management platform, improving analyst workflow for complex, multi-dimensional data
- **Design system tooling**: built an internal component usage reporting tool to analyze React component adoption across the codebase, enabling data-driven decisions about design system evolution
- **Design system mentorship**: serve as the design system education resource for Alloy's product engineers, bridging design intent and implementation across teams

Senior UI Engineer

10/2023–8/2024

Droit (acquired by FIS) · New York City

Front-end development at a regulatory compliance platform for global financial institutions.

- **Applications**: productionized and delivered the first version of a new application to help analysts validate transaction reports before they are sent to regulators
- **Design systems**: improved build performance and developer experience of Droit's component library

Tools

AI Tooling

Cursor, Claude Code, Codex, Conductor, CodeRabbit, Agentic Workflows

General

TypeScript, Vercel, CircleCI, AWS, GitHub, Docker, Linear, Visual Studio Code, Figma

Front End

React, JSX/TSX, Next.js, Vite, GraphQL, Apollo, Prisma, Jest/Vitest, Node.js

UI

Storybook, styled-components, Emotion, SCSS, Tailwind, Ladle, Radix, shadcn/ui, MDX, HTML/CSS

Education

B.Arch, Architecture
University of Oregon

Updated April 2026

Senior Software Engineer

7/2022–3/2023

Forte · remote (New York City)

First engineering hire at a music education startup; built the application from scratch and set the technical and cultural foundation for a growing team.

- **From scratch**: set up Forte's Next.js application from the ground up; chose tools and workflows to enable quick iteration; established a component library for consistent user experience
- **Built features**: built the first iteration of various customer-facing features for Forte's marketplace: Teacher Profiles; Certified Institutions; Invitations and Sign Up; Teacher Ratings and Reviews; "Switch Role" functionality; etc.
- **UX/Product Architecture**: informed the UX, product flow, and overall architecture of a multi-role marketplace application

Senior Front End Engineer

4/2021–6/2022

Monograph · remote (New York City)

Design system and feature development at a practice management platform for architecture firms.

- **Design systems**: built components for Monograph's component library; wrote documentation and set up workflows between Figma and the codebase
- **Features**: built customer-facing features: Team Directory; filter functionality for Monograph Resource; Settings UI; "Consultants" feature; etc.
- **Glue work**: process documentation, tool selection, configuration, code reviews, data migration scripts, customer support collaboration, bug triaging; coordination that kept the team moving

Software Engineer

7/2018–3/2021

Better.com · New York City

Design system and feature development on Better's loan origination platform.

- **Design systems**: established Better's Design Systems team; built libraries to empower engineering teams to build consistent and clean UIs
- **Features**: built assorted borrower-facing features: Redisclosure Service; "Required Assets and Buffer" logic; Authentication/Session Expiration; UX for uploading a competitor's Loan Estimate; Loan Overview page; etc.
- **Integrations**: extended integrations with sales and marketing tools (call scheduling, A/B testing, etc.)

Software Engineer

9/2015–6/2018

Architizer · New York City

Full-stack and front-end development at an architecture products marketplace.

- **Component libraries**: established and maintained a UI component system to speed up feature development, and improve collaboration with designers
- **Features**: built internal- and external-facing features: a private messaging interface; directory interfaces to Solr search indexes; etc.
- **Integrations**: extended integrations with external tools for analytics, error logging, marketing, and customer support

Software Engineer

9/2014–8/2015

EyeCue Lab · Portland, Oregon

Internship-to-hire at a product consultancy; built full-stack features and marketing pages across client projects.

AppleCare Advisor

6/2013–5/2014

Apple · remote (Eugene, Oregon)

Technical support for macOS products while completing degree.
