Andrew Westling

Design Engineer

✉️ hi@andrewwestling.com
📍 Brooklyn, NY

Design engineer with a decade of experience working where product design and software engineering meet. I build resilient interfaces, design systems, and frontend platforms that help teams ship high-quality products. I bring a background in architecture and work primarily with TypeScript, React, Next.js, Tailwind, and AI-assisted development workflows.

👔 Experience

Member of Technical Staff

12/2025–Present

McWestling · Brooklyn, NY

My family software factory and holding company. I do everything, from paperwork and accounting, to deciding what to build and writing the software.

Senior Design Engineer

9/2024–10/2026

Alloy · New York City

Design engineering at an identity and fraud prevention platform for financial institutions.

- **Platform migration**: led the early stages of an architectural migration of Alloy's frontend application, with rollout planned across ~50 product engineers.
- **Filter interfaces**: built filter interfaces for Alloy's risk management platform, improving analyst workflows for complex, multidimensional data.
- **Design system tooling**: built an internal component-usage reporting tool to analyze React adoption across the codebase and inform design system decisions.
- **Design system mentorship**: served as a technical resource for product engineers working with the design system and translating design intent into implementation.

Senior UI Engineer

10/2023–8/2024

Droit (acquired by FIS) · New York City

Front-end development at a regulatory compliance platform for global financial institutions.

- **Applications**: productionized and delivered the first version of a new application to help analysts validate transaction reports before they are sent to regulators
- **Design systems**: improved build performance and developer experience of Droit's component library

🔧 Tools

AI Tooling

Claude Code, Codex, Orca, Conductor, Cursor, Agentic Workflows

General

TypeScript, Railway, Cloudflare, Vercel, PostHog, AWS, GitHub, Docker, Linear, Visual Studio Code

Front End

React, JSX/TSX, Next.js, Vite, GraphQL, Prisma, Jest/Vitest, Node.js

UI

Storybook, styled-components, Emotion, SCSS, Tailwind, Ladle, Radix, shadcn/ui, MDX, HTML/CSS

🎓 Education

B.Arch, Architecture
University of Oregon

Updated November 2026

Senior Software Engineer

7/2022–3/2023

Forte · remote (New York City)

First engineering hire at a music education startup; built the application from scratch and set the technical and cultural foundation for a growing team.

- **From scratch**: set up Forte's Next.js application from the ground up; chose tools and workflows to enable quick iteration; established a component library for consistent user experience
- **Built features**: built the first iteration of various customer-facing features for Forte's marketplace: Teacher Profiles; Certified Institutions; Invitations and Sign Up; Teacher Ratings and Reviews; "Switch Role" functionality; etc.
- **UX/Product Architecture**: informed the UX, product flow, and overall architecture of a multi-role marketplace application

Senior Front End Engineer

4/2021–6/2022

Monograph · remote (New York City)

Design system and feature development at a practice management platform for architecture firms.

- **Design systems**: built components for Monograph's component library; wrote documentation and set up workflows between Figma and the codebase
- **Features**: built customer-facing features: Team Directory; filter functionality for Monograph Resource; Settings UI; "Consultants" feature; etc.
- **Glue work**: process documentation, tool selection, configuration, code reviews, data migration scripts, customer support collaboration, bug triaging; coordination that kept the team moving

Software Engineer

7/2018–3/2021

Better.com · New York City

Design system and feature development on Better's loan origination platform.

- **Design systems**: established Better's Design Systems team; built libraries to empower engineering teams to build consistent and clean UIs
- **Features**: built assorted borrower-facing features: Redisclosure Service; "Required Assets and Buffer" logic; Authentication/Session Expiration; UX for uploading a competitor's Loan Estimate; Loan Overview page; etc.
- **Integrations**: extended integrations with sales and marketing tools (call scheduling, A/B testing, etc.)

Software Engineer

9/2015–6/2018

Architizer · New York City

Full-stack and front-end development at an architecture products marketplace.

- **Component libraries**: established and maintained a UI component system to speed up feature development, and improve collaboration with designers
- **Features**: built internal- and external-facing features: a private messaging interface; directory interfaces to Solr search indexes; etc.
- **Integrations**: extended integrations with external tools for analytics, error logging, marketing, and customer support

Software Engineer

9/2014–8/2015

EyeCue Lab · Portland, Oregon

Internship-to-hire at a product consultancy; built full-stack features and marketing pages across client projects.

AppleCare Advisor

6/2013–5/2014

Apple · remote (Eugene, Oregon)

Technical support for macOS products while completing degree.
